

# BAHAMA

# RIVELIN LUXURY OUTDOOR LIVING

To ensure a smooth Bahama installation, install the gas supply within the grey area shown in the drawing. The Bahama will be supplied with a ½" BSP male fitting for natural gas and an 8mm compression fitting for LPG. The height of the gas pipe emerging from the ground can be up to 200mm without interfering with the underside of the gas burner. The Bahama burner is on a 400mm flexi pipe, allowing for plenty of adjustment on site.

When a 240V remote burner is purchased, a 240V supply will have to be provided to the underside of the table. Any isolation point installed within the table base, will only be accessible when the table top is removed. The 240V supply is connected to the table within a water proof enclosure mounted within the table base.

All Dimensions shown in (mm)

Please note: This model is classed as a permanent gas connection and therefore it's the buyer's responsibility to obtain confirmation from their gas safe registered installer that the site has approval for the safe installation and operation of a Rivelin gas appliance.
